

APPARATIEFFIMERI_PRESS/ENG

Apparati Effimeri™ is a video-artist collective born in Bologna in 2008. It offers professional video solutions through the conscious use of new media technologies; finding inspirations in new artistic tendencies while keeping in mind the needs of the artists.

Their professional staff deal with the designing and developing of visual environments unique and functional to all spaces and able to enhance every kind of location.

Apparati Effimeri creates video sets for concerts and live performances. Their work includes an in-depth analysis of space so as to make the most of the available technology and achieve the greatest impact.

The surfaces where they project evade the classic 4:3 screen format in order to create visual environments which embrace the public - using multi-screen projection, contrived surfaces and pre-existing objects. Live visual content is synchronised with sound (through frequency spectrum analysis), tracking the perspectives and limits of existing surfaces. The scenic effect is therefore unique and unrepeatable.
